

Environmental Awareness Training Course (ME02) on-site only

“No matter how good your systems are,
at the end of the day you are totally reliant on people”

No experienced professional would disagree with this statement. Effective management of the issues that confront a business, means that the people within that business are supportive and well informed. No where is this more true than in relation to environmental issues.

The environment is often cited as the most consistently divisive issue of our time. Anecdotal evidence from around the world suggests that one quarter of the population is committed to measures that lessen human impact on the environment. A further quarter of the population takes the exact opposite approach. They believe that environmental degradation is a myth, or that if there is any degradation, future generations will be able to rectify the damage. The remainder, and largest section of the population, appears not to have any great conviction one way or another.

The Systems 3 Group's environmental awareness programs aim to support employees that are committed to the environment and build support from those employees that have not yet made that commitment.

Our awareness programs are always persuasive (but not zealous), targeted to the needs of the organization and entertaining.

Above all, our awareness sessions are interactive.

Our research shows that interactive awareness sessions provide organizations with the greatest opportunity to not only educate people about the environmental issues relevant to them - but also build commitment to environmental responsibility.

The Systems 3 Group can design tailored environmental workshops aimed at all levels of employees within an organization. While course objectives can vary, a typical awareness session has the following objectives:

- Provide an overview of environmental management
- Explain the organisation's approach to managing its key environmental risks
- Outline each employees responsibilities within the environmental management system
- Increase organisational commitment to the EMS

A typical course outline would be as follows:

- Environmental fundamentals
- Overview of the organisation's key environmental issues
- The organisation's environmental management system – what it is and how it works
- The benefits of implementing environmental management systems
- Environmental regulatory framework
- Legal obligations and key licence requirements
- Due diligence
- ISO 14001 –an introduction
- Environmental policy
- The need for continual improvement
- The benefits of certification
- Individual responsibilities in the EMS

Over the last 15 years, S3G has conducted environmental awareness training for some of Australia's best known companies including the following:

- BHP Billiton
- Stanwell Corporation
- Rio Tinto
- City West Water
- Alcoa
- Pratt & Whitney
- Kraft Foods (China)
- Petronas (Malaysia)

Contact us to learn how The Systems 3 Group can design an environmental awareness session for your business. We can deliver that program, or provide you with the necessary coaching to enable you to deliver it yourself.
